

Synchrovit® C is specially formulated using a 'liposomal' serum to enable maximum absorption of the active ingredients into the skin, with double the concentration of vitamin C compared to a normal solution.

The bottle has been developed to optimise the absorption of vitamin C, SOD and zinc. Vitamin C is known to be the least stable of all vitamins due to its sensitivity to light, warmth and air. The vitamin C is held as a powder in the neck of the bottle and only activated when mixed with the enzyme and zinc on opening the bottle.

For maximum effectiveness **Synchrovit® C** can be stored in the fridge or a cool dark dry place and is still active after 10 days. For optimum results we recommend that **Synchrovit® C** is continued for up to 6 months.

Directions for use:

Pigmentation resulting from inflammation (lasers, peels, microderm or sun burn, skin damage, post acne)

Everyday, morning and evening (morning application in conjunction with **Thiospot**)

Age or hormonal pigmentation

Use in conjunction with **Tebiskin Gly - C** as advised

Reddening or hyper-reactive skin post clinical treatments

Use twice a day in conjunction with **Sensicure Serum**

Anti-ageing

Use in conjunction with **Fillast serum** and **Terproline Cream**

Light ageing, 28 - 35 years old

Alternate days, preferably in the evening

Moderate ageing, 35 - 50 years old

Alternate days, morning and evening

Advanced - severe ageing, 50 - 75 years old

Everyday, morning and evening

SOLUTIONS FOR SKIN - MEDICALLY TESTED

Why Do We Age?

The skin's ageing process is a combination of factors, but typically the skin's ability to retain moisture reduces as lipid density in the upper skin layers is lost and hyaluronic acid levels in the dermis reduce. This can lead to binding of collagen fibres and reduced elastin levels. Also new collagen and elastin production decreases, so the skin loses elasticity and firmness resulting in lines, wrinkles, dry and sagging skin. The speed this happens varies with each individual; genetics have a lot to do with it; but this is only part of the story.

Free Radicals

Living your life, including drinking alcohol, consuming food, smoking and exercising all create damaging chemicals (known as free radicals) that fuel the ageing process. UV exposure especially generates a lot of free radicals in the skin.

Superoxide is the most powerful and most damaging free radical produced in the skin. Free radicals damage cell walls, blood vessels, cell DNA and break fibres. They also cause

inflammation which can lead to increased pigment production and a more reactive skin, prone to redness and swelling. This can lead to thread veins, age spots and darker areas.

What other companies will not say

Antioxidants are chemicals which can neutralise free radicals, reducing the damaging effects on fibres and cells. However, the extremely active free radical **Superoxide**, cannot be neutralised by any antioxidant formula. It is only when it eventually converts itself to the less active hydroxyl free radical, that it can be neutralised, by which time it has done significant damage.

The ENZYME Solution

Synchrovit® C is a serum which contains **Superoxide Dismutase (SOD), Vitamin C (l-ascorbic acid)** and **Zinc**.

Superoxide Dismutase is the naturally occurring enzyme which forces superoxide to convert immediately to the hydroxyl radical. This allows the vitamin C to neutralise it, meaning less damage to the skin. Zinc boosts the activity of SOD and Vitamin C.

Zinc has superb anti-oxidant properties. It plays a role in the protection and function of cellular membranes and therefore inhibits the formation of free radicals and also triples the activity of vitamin C as an antioxidant

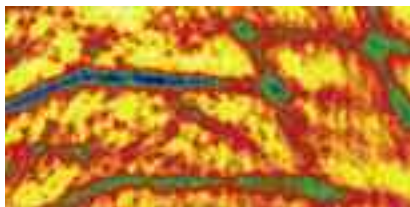

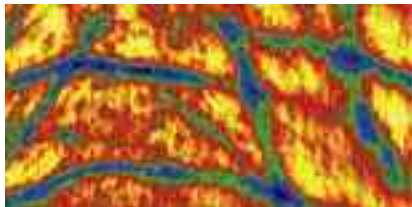

This revolutionary anti-ageing face and neck enzyme treatment stops ageing and skin damage before it starts, but also remarkably stimulates the production of new collagen and elastin fibres to improve skin tone and elasticity.

- Reduces expression lines and wrinkles and delivers a toned compact youthful looking skin
- Reduces exposure to free radical ageing and damage
- Effectively reduces excess pigmentation whether caused over time, from sun exposure or following inflammation
